

JOSE FRANCO

956 844 2891 | Roma, TX | jose2005rfranco@gmail.com | www.linkedin.com/in/jose-franco022

EDUCATION

University of Texas at Rio Grande Valley
B.S. Computer Science | 3.82 GPA

Edinburg, TX
August 2023 – December 2026

PROFESSIONAL EXPERIENCE

University Lands

Data Analyst

Remote

August 2026 – Present

- Build and maintain SSRS reports and Power BI dashboards tracking well performance and oil/gas production data for operations and accounting teams.
- Collaborated with the accounting department to construct an interactive Power BI dashboard monitoring operator payment variances, detecting approximately 1,000 discrepancy records from one operator over a 12-month period and successfully recovering \$5,000.
- Developed the company's first cross-application reconciliation report comparing property numbers across 30,000 wells in the accounting and land administration systems, identifying 18,000 unmatched records with 100% accuracy and exposing a data gap that had previously gone untracked.
- Leading query optimization for accounting's Power BI dashboards, restructuring SQL queries and data models to resolve memory errors during refresh and improve report reliability.

University Lands

Data Analyst Intern

Houston, TX

June 2026 – August 2026

- Built an SSRS governance dashboard tracking usage, run times, errors, subscriptions, datasets, and data sources across 500 reports, revealing that 80% (about 400) were unused and could be retired.
- Designed a custom Complexity Score metric weighing datasets, data sources, and query length, giving the team a data-driven roadmap to migrate the ~100 active SSRS reports in order of effort.
- Developed an SSIS monitoring dashboard for 200 packages tracking success and failure, run durations, and job history, with a step-by-step diagnostic that traces errors to their root cause.
- Built a keyword-based error classifier that condensed long, unclear SSIS error logs into two-word categories, cutting failure diagnosis time from about 10 minutes to a few seconds.

Kemper

Quality Assurance Analyst Intern

McAllen, TX

February 2026 – April 2026

- Built a Power BI dashboard logging application activity for about 10,000 users, flagging roughly 15 anomalies such as after-hours logins to support security audits and compliance reviews.

Rio Bank

IT Support Technician

McAllen, TX

September 2025 – February 2026

- Provided first-level support to 100+ system users, answering routine technical queries and escalating complex network or software issues for advanced troubleshooting.
- Configured hardware and monitored system access logs, ensuring user permissions were appropriately maintained according to strict security standards.

Machine Intelligence Lab

Research Assistant

Edinburg, TX

November 2024 – August 2026

- Tracked project milestones and led a team of 3 researchers, gathering project-related data to ensure strict research timelines were met.
- Assisted with ad-hoc data analysis using Python, preparing and analyzing datasets to refine model parameters and extract actionable insights.

Elsa EDC (Economic Development Corp.)

Data Science Intern

Elsa, TX

September 2024 – November 2024

- Extracted and analyzed regional economic datasets for ad-hoc analysis, generating insights that guided city development strategies.
- Built and deployed 15+ Tableau dashboards, managing requests for routine reports and providing timely data visualizations for city leadership.

PROJECTS

SpaceX Falcon-9 Rocket Landings

July 2025

- Prepared and analyzed Falcon 9 launch data in Python to identify the key launch parameters that predict first-stage landing success.
- Built interactive visualizations with Plotly and Seaborn to explore how launch parameters relate to landing outcomes.

SKILLS

Programming Languages: Python (pandas, NumPy), SQL (T-SQL), DAX, C++

Tools & Platforms: Power BI (Desktop, Service, Gateways), Power Query, SSRS, SSIS, SQL Server Agent, SSMS, Azure DevOps, Excel, Tableau, Plotly, Seaborn, Jupyter, Git, Linux, VS Code

Spoken Languages: English (Fluent), Spanish (Fluent)
